

IN THE CLAIMS:

sus D1
12. An infectious phage containing at least one copy of a mutant form of a phage coat protein, wherein said mutant form has lost the ability to mediate infection of a natural host by said infectious phage.

C'
13. (Twice amended) A phage collection comprising:
an infectious phage containing at least one copy of a mutant form of a phage coat protein wherein
said mutant form has lost the ability to mediate infection of a natural host by said
infectious phage.

C2
14. (Previously amended) The phage collection according to claim 13 wherein said
phage collection comprises a phage display library.

15. (Twice amended) A phage collection consisting essentially of:
an infectious phage containing at least one copy of a mutant form of a phage coat protein wherein
said mutant form has lost the ability to mediate infection of a natural host by said
infectious phage.
